POWER:	
SENSITIVITY:	
FREQUENCY RESPONSE:	N/D
SIZE:	N/D

An evolution of our well known LW1005, this is a two way shallow cabinet screen system with new bass enclosure and a new driver, to be bi-amplified or passive, and very compact. The passive version is now fitted with our new SCD (screen compensation device). Its new passive network provides the system with all the presets needed and makes this model an smooth, superb response system. 1x15" bass speaker and 2,84" drive motor with external aiming device. For cinemas up to 1500 m3. The new horn gives an incredible flat treble response. With a depth of 27 cm. (10"), suitable for cinemas with little space behind the screen. This enables, in some cases, having an extra row of seats. As with the rest of our LW screen systems, models for passive mode or bi-amp system are available. To save labour costs, it is delivered pre assembled in two cartons.
